DETAILED ACTION

1. This is the third Office action on the merits of Application No. 10/522,965, filed on 29 July 2005. Claims 1-21 are pending.

Documents

2. The following documents have been received and filed as part of the patent application:
 - Information Disclosure Statement, received on 01/31/05
 - Declaration and Power of Attorney, received on 07/29/05
 - Replacement Drawing, received on 08/30/07

Allowable Subject Matter

3. Claims 1-21 are allowed.
4. The following is an examiner's statement of reasons for allowance:

Claim 1:

The prior art of record fails to show or render obvious a multi-path torque coupling comprising an input shaft, an output shaft, a wet-plate clutch, a pumping mechanism, and a planetary gear set, as recited in claim 1; specifically, wherein the input shaft, the wet-plate clutch, the second element, the third element, the fourth element, and the output shaft define a first torque path through the multi-path torque coupling; and the input shaft, the first element, the third element, the fourth element, and the output shaft define a second torque path through the multi-path torque coupling.

Claim 12:

The prior art of record fails to show or render obvious a torque coupling comprising an input shaft, an output shaft, a clutch, a locking mechanism, and a planetary gear set, as recited in claim 12; specifically, wherein the first element is connected to the first clutch member and to the input shaft, the second element is connected to the second clutch member, the third element is connected to the input shaft, and the fourth element is connected between the first element and the second element, and between the second element and the third element.

Claim 16:

The prior art of record fails to show or render obvious an automotive vehicle comprising primary and secondary wheels, a power unit, and a torque coupling, as recited in claim 16; specifically, wherein the torque coupling includes a torque modulating clutch, a locking mechanism, and a planetary gear set connected such that a locking mechanical path and a separate torque modulating clutch path exist through which torque is transferred between the power unit and the secondary wheels, with the amount of torque transferred through the torque modulated clutch path in relation to the amount transferred through the locking mechanical path being variable by the torque modulating clutch, whereby the apportionment of torque between the primary and secondary wheels is controlled by the torque modulating clutch and the independent locking mechanism.

Claim 18:

The prior art of record fails to show or render obvious a multi-path torque coupling comprising a wet-plate clutch, a pumping mechanism, and a planetary gear set, as recited in claim 18; specifically, wherein the clutch, the sun gear, the planet gear and the carrier are configured for providing a first torque path between the input shaft and the output shaft; and the ring gear, the planet gear, and the carrier are configured for providing a second torque path between the input shaft and the output shaft.

Claim 21:

The prior art of record fails to show or render obvious a multi-path torque coupling comprising a means for providing a mechanical clutch control, a means for selectively transferring torque between the input shaft and the output shaft, and a means for providing a locking engagement, as recited in claim 21; specifically, wherein the means for providing a mechanical clutch control is responsive to an amplified difference between an angular velocity of the output shaft and an angular velocity of the input shaft, and the means for providing a locking engagement mechanically transfers torque between the input shaft and the output shaft independent from the means for selectively transferring.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
